Some Cool Sounding Buzzwords

Less Buzzy and Somewhat More Explanatory Subtitle

The main goals for this slide:

- ▶ This is just to show you how this *template* works
- ▶ There are two 'emphasize' functions used to highlight & italicize texts
    - ▶ '\empy' does *this* and '\empr' does *this*.
- ▶ The colors in this template is selected from DKU Logo:

- ▶ Note that hyperlinks, by default, are not highlighted. Of course, you can change this: e.g., *https://dukekunshan.edu.cn*

A (hopefully) useful function in this LaTeX template is:

$$\text{\textbackslash examplebox\{ExampleTitle\}\{ExampleContents\}}$$

which does this:

> **Example of the Command \examplebox**
>
> This is what it does. Pretty self-explanatory, isn't it?
> Given the color them, I *recommend* using \empr inside of
> examplebox. The \empy command does not look *that* good.

There are color boxes for Definition, Theorem, and Lemma:

> **Definition 1: Test**

> **Theorem 2: Test**

> **Lemma 3: Test**

Proof.

□

You can refer to them by Def. 1, Thm. 2, Lem. 3.
